FAHIM AL JADID
SOFTWARE DEVELOPER

PROFILE

The moment my first Python program printed "Hello World" on the terminal, I knew I was hooked on the world of software creation. Software development, on the other hand, has never been solely a job for me. It has been a rewarding endeavor to constantly grow and enhance my abilities in the development of high-quality software. What appeared to be a simple "Hello World" has suddenly blossomed into a full-fledged obsession that appears to be growing more fascinating as the years pass.

PERSONAL PROJECTS

- **E-COMMERCE API**

The basic features in this API:
  - User registration, login, and logout
  - Authentication using JSON Web Tokens (JWT).
  - The ability to add, update, view, and remove all products in the store.
  - Add or remove items from the cart.
  - Make a cart for each user, add and delete things, and evaluate the bill.

  https://github.com/FahimJadid/E-COMMERCE-API

- **TODO LIST**
  - It implements the functionality of a to-do list with NodeJS and JavaScript, performing activities such as task adding, removal, and updating.

- **TIC TAC TOE WEB APP**
  - Created with bare JavaScript code, no framework or library, and HTML and CSS. It manipulates the DOM components. It makes use of both event handling and object manipulation.
